

— ROB DAINTREE · JACOB HEWLETT-CASE · TELUS MARCOMM + AEO

What's **proprietary** to Growth Automated — and what's **commodity**.

The honest answer separates the panel from the platform underneath it. **Measurement is commoditizing** — several vendors ship comparable primitives, and that's the design of the syndicated model. Value moves up-stack: to **what we curate**, **what we retain**, **how we compose**, **how we interpret**, and **who we've been for twenty-five years**. Ten pillars, three tiers.

— TIER 1 · THE DATA MOAT

What you can't reproduce quickly

Compounds every week the panel runs

01

Longitudinal data, store & analysis

The tape only we have.

Every weekly pull retained since July 17 · raw window is 24 days · **we have 11 weeks and it grows forever**. Time-series, drift detection, panel-maturity — all only possible because we retain history the measurement layer doesn't.

02

Clean data supply chain for the industry

The canonical source of truth.

One registry mirrored across every Canadian carrier · one brand ring, one competitor set, one normalization discipline. Reads produced without this discipline **cannot be compared to ours**.

07

Data sovereignty

Canadian data · Canadian control.

Cloudflare Canada region · PIPEDA-compliant handling · subscriber data ring-fenced · **no third-country dependency** for client-specific reads.

— TIER 2 · THE DELIVERY PRODUCT

How the data becomes decisions

The intelligence layer, embedded in the deliverable

03

Automated multi-constituent reports

One data set · many audiences.

Programmatic delivery across **lines of business, segments, audiences, locations**. Weekly automation, no per-audience manual work.

04

Claude analytics in reporting · with filters

The insight layer is in the deliverable.

Every report filterable by AI system, date range, question, competitor · plus **natural-language questions via Claude MCP**. Intelligence inside the deliverable, not a separate tool.

06

Bilingual FR / EN support

Both official languages · both markets.

Panel prompts in **French and English**. Quebec market coverage · Vidéotron landscape · FR-first briefs available for Quebec-based subscribers.

08

Multiple surfaces + engagement models

Meet your teams where they work.

Cloudflare-gated site · **MCP inside Claude / ChatGPT** · REST · BI dashboards · Slack digests. Multi-tier: exec · working · technical · commercial.

— TIER 3 · INSTITUTIONAL VALUE

What no other vendor can bring

Regulator-ready · corporate-ready · career-backed

05

Harmonized issues management for operators + regulators

The Telco Observatory layer.

Sector-level issue registry — activation fees, outages, rural coverage, pricing — mapped to **CRTC / ISED / Competition Bureau** frames. Regulator-readable synthesis on top of subscriber-private reads.

09

Track progress vs. goals · company-wide harmonization

One shared truth across your org.

Set targets ("SMB Essentials to 60 by Q1"), track weekly. The panel becomes the **neutral scoreboard every function references** — SMB, brand, digital, procurement all reading the same bottoms-up data set.

10

Rahul's twenty-five years

The human capital layer.

25 years across **telco · tech · media · commerce · digital**. Rogers alumnus. Why the scorecards are P&L-owner-shaped, not generic dashboards. Not a vendor · a peer.

The reframe — from "what's proprietary" to "where value lives"

As the measurement layer commoditizes, value moves up-stack: to what Growth Automated **curates** (the panel), what we **retain** (the history), how we **compose** (P&L-owner-shaped reads), how we **interpret** (the framework), who we **are** (25 years in this exact space), and how we **operate** (regulator-ready, bilingual, sovereign, harmonized). **That's where the moat is. That's the layer that compounds.**
