01

### Measurement pipeline

**Every model. Every day. Every answer stored.**

Real ICP questions go to **seven answer engines** daily. Every answer is captured verbatim, then scored for mention presence, rank, sentiment, and cited sources — for TELUS and every competitor. Rolls up into visibility by prompt · domain · exact URL · competitor. **Append-only history** that can't be rebuilt after the fact.

02

### Analytics + activation

**Finding → step-by-step plan.**

**Gap analysis** diffs your citation set against competitors', by prompt and by source. Each gap becomes a **step-by-step action plan** a team can execute against — not a metric, an assignment. **Location tracking** is national plus **city & region** for Google AIO / AI Mode — directly relevant to TELUS regional footprint.

03

### Delivery surfaces

**Meet your teams where they already work.**

**REST API · MCP server** so Claude and ChatGPT query the data directly in the tools your teams use · **Looker Studio connector** · **Google Search Console + GA4 blending** · **white-label shareable report links** for stakeholders who don't log in.

## ROADMAP

## What ships next — already funded, already scoped

Canada is the platform's #2 market by brands tracked (99).

LIVE

#### City & region tracking

Google AIO + AI Mode · local scoreboards for the TELUS regional footprint.

LIVE

#### Canada as #2 market

99 Canadian brands tracked — the foundation the syndicate builds on for the Big Three view.

NEXT

#### Audience segment tracking

Which **buyer type** you win or lose with — SMB · consumer · enterprise, at the query level.

NEXT

#### Actions module

Finding → approved client work → **measure what changed**. Closes the loop from insight to outcome.Ready to see the **Canadian telco AEO panel** for yourself? [FOUNDING SUBSCRIBER TERMS](#)
