

— ROB DAINTREE · JACOB HEWLETT-CASE · TELUS MARCOMM + AEO

What makes our platform **proprietary** —
the technical layer under the panel.

Underneath the syndicated panel sits a **purpose-built measurement engine** we operate as production infrastructure. It queries every major AI answer engine every day, scores every answer, and grows an **irreplaceable citation history** that cannot be reconstructed after the fact. Six capability layers below — each mapped to what TELUS gets on subscription.

— LAYER 1 · THE MEASUREMENT PIPELINE

Every answer engine. Every day. Every answer captured.

Runs 24/7 · nothing to install on your side

01 · THE DAILY ASK

Seven answer engines, queried daily

Every buyer question, every model, every day.

A real ICP question is sent to **up to 7 AI answer engines** every day and **every answer is stored verbatim**. The engines below are the ones that matter for a Canadian telco buyer — and they cover the models your customers already use.

ChatGPT

Google AI Overview

Google AI Mode

Gemini

Perplexity

Claude

Microsoft Copilot

02 · THE SCORE & STORE

Structured scoring on every answer · you and every competitor

Not just "were you mentioned" — where, how, who cited it.

For each captured answer we extract: **brand mention presence**, **rank position**, **sentiment**, and **which sources the AI cited** — for TELUS and for every named competitor. Rolls up daily into **visibility by prompt · by domain · by exact URL · by competitor**. History is append-only. This is the record that cannot be rebuilt after the fact, and it compounds every day the panel runs.

— LAYER 2 · THE INTELLIGENCE & DELIVERY LAYER

From captured answer to action taken in your workflow.

Where the data becomes a decision

03 · GAP ANALYSIS + ACTION PLANS

Where competitors get cited and you don't

Finding → step-by-step plan.

Every answer's citation set is diffed against yours. Gaps are surfaced by prompt, competitor and source. Each gap becomes a **step-by-step action plan** a team can execute against — not a metric, an assignment.

04 · LOCATION TRACKING

Country · city · region resolution

National scoreboard — and the local one.

Every prompt can be geo-scoped. **Country-level tracking is live** for all engines; **city and region tracking is live** for Google AI Overview and AI Mode. Directly relevant for TELUS's regional presence (BC/AB/QC/Health verticals).

05 · DELIVERY SURFACES

API · MCP · BI · blended traffic

Meet your teams where they already work.

Our own **REST API · MCP server** so Claude and ChatGPT query your data directly in the tools your team uses · **Looker Studio connector · Google Search Console + GA4 blending · white-label shareable report links** for stakeholders who don't log in.

— LAYER 3 · ROADMAP

What ships next — already funded, already scoped

Canada is the platform's #2 market by brands tracked (99).

LIVE

City & region tracking

Google AI Overview + AI Mode. Local scoreboards for TELUS regional footprint.

LIVE

Canada as #2 market

99 Canadian brands tracked — a foundation the syndicated panel builds on for the Big Three sector view.

NEXT

Audience segment tracking

Which **buyer type** you win or lose with — SMB vs. consumer vs. enterprise, at the query level.

NEXT

Actions module

Turn a finding into approved client work, then **measure what changed** afterward — closes the loop from insight to outcome.
